Bartle - Introduction To Real Analysis - Chapter 6 Solutions

Bartle - Introduction To Real Analysis - Chapter 6 Solutions Section 6.2 Problem 6.2-4. Let $A = \{a_1, a_2, \dots, a_n\}$ be real numbers and let f be defined on \mathbb{R} by $f(x) = \sum_{n=1}^{\infty} (a_n |x|)^2$ for $x \in \mathbb{R}$. Find the unique point of relative minimum for f . Solution: The first derivative of f is: $f'(x) = 2 \sum_{n=1}^{\infty} a_n |x|$. Equating f' to zero, we find the relative extrema on \mathbb{R} as follows: $f'(c) = 2 \sum_{n=1}^{\infty} a_n |c|$

$\sum_{n=1}^{\infty} (a_n + c) = \sum_{n=1}^{\infty} a_n + \sum_{n=1}^{\infty} c$... Mar 2th, 2024

Bartle - Introduction To Real Analysis - Chapter 8 Solutions

Bartle - Introduction To Real Analysis - Chapter 8

Solutions Section 8.1 Problem 8.1-2. Show That

$\lim_{x \rightarrow 0} (x^2 + 1 + nx^2) = 0$ For All $x \in \mathbb{R}$. Solution: For $x = 0$, We Have $\lim_{x \rightarrow 0} (x^2 + 1 + Nx^2) = \lim_{x \rightarrow 0} (0 + 1) = 0$, So $f(0) = 0$. For $x \in \mathbb{R} \setminus \{0\}$, Observe That 0
