A short introduction to projective geometry. The projective geometry $PG(2,4)$ then consists of 21 points (rank 1 subspaces) and 21 lines (rank 2 subspaces). Each line contains 5 points and each point is contained in 5 lines. All the points and lines are contained in 1 plane, so we call this geometry a projective plane of order 4. Note that in this case Jan 2th, 2024.

Introduction to Projective Geometry Dover Books on ... In geometry, a striking feature of projective planes is the symmetry of the roles played by points and lines in the definitions and theorems, and duality is the formalization of this concept. There are two approaches to the subject of duality, one through language (§ Principle of Duality) Feb 27th, 2024.
