Probabilistic Proof Systems – A Survey Polynomial-time Algorithms. Definition 1 (NP-proof Systems): Let $S \subseteq \{0, 1\}^*$ and f be a function so that $x \in S$ if and only if there exists a $w \in \{0, 1\}^*$ such that $(x; w) \in f$. If f is computable in time bounded by a polynomial in the length of its first argument then we say that S is an NP-set and that f defines an NP-proof system. Traditionally, NP is ... Mar 20th, 2024
