Mole-Mass And Mole-Volume RelationshipsNov 02, 2020 · MoleMass And MoleVolume Relationships 1 Mole-Mass And Mole-Volume Relationships Suppose You Need 3.00 Mol Of

Sodium Chloride (NaCl) For A Laboratory Experiment. If We Knew The Weight Of NaCl Per 1.00 Mole, We Could Then Find Out How Much Mass We Need For 3.00 Moles. Mass (grams) = # Of Moles × Molar Mass. The Molar Mass Of NaCl Is 58.44 g/mol. So, For 3.00 Moles, We Would Need 175.32 grams. This is a simple calculation, but it illustrates the importance of molar mass in stoichiometry. In some situations, the term molar mass is used interchangeably with molecular weight, but they are not the same. Molar mass is a property of a substance, while molecular weight is a property of a molecule. For example, the molar mass of water is 18.015 g/mol, but the molecular weight of a water molecule is 18.015 atomic mass units (amu). The volume of a gas varies with temperature and pressure. Because of these variations, the volume of a gas is usually measured at a standard temperature and pressure (STP). At STP, one mole of any gas occupies a volume of 22.4 liters. This is a useful relationship to know when working with gases in stoichiometry. In some situations, the term molar mass is used interchangeably with molecular weight, but they are not the same.
